CalPhusion: Enhancing Rhizophagy for Stronger Roots & Better Biology

What is CalPhusion?

CalPhusion is the only stabilized fertilizer delivering Calcium and Phosphorus in true ionic form. Unlike traditional fertilizers, its ionic Ca and P are immediately available and highly compatible with biological products.

How CalPhusion Enhances Rhizophagy

Microbes (bacteria and fungi) grow and reproduce based on available nutrients. Adding CalPhusion provides essential Calcium and Phosphorus in addition to carbon and sugars. This creates a richer microbial community with higher Ca and P content.

Benefits

- More microbial divisions and longer-lasting activity before nutrient depletion
- More sustainable rhizophagy cycle
- Increased root mass and abundant root hairs
- Stronger, more resilient root systems with better nutrient uptake
